

Available in a variety of colors:

Product: Dash Station

Measurements: 99 high x 12 wide

Cost: \$6995

Description: Wireless running timer for playgrounds and parks that measures how fast you run and compares it to the fastest time of the day. Start side and finish side can be placed anywhere from 10 yards - 75 yards apart and require no external power source because they run on solar panels with battery back-up.

User presses the start button, waits for a countdown on the display, then crosses the start beam. The timer stops when the user crosses the finish beam.

Made of weatherproof materials and is virtually maintenance-free. Comes with 2-year warranty and has an expected lifespan of 15-20 years. Simple installation requires cementing four posts into ground.

Materials:

- ABS plastic front piece ($\frac{3}{8}$ " thick) and Lexan display cover
- Composite post
- Electrical enclosure box rated at P66 rating for water resistance
- Pressure-treated wooden side post
- 25 W Monocrystalline solar panel and 12V back-up battery
